Motivated by a variational model concerning the depth of the objects in a picture and the problem of hidden and illusory contours, this book investigates one of the central problems of computer vision: theu0026#xa0; topological and algorithmic reconstruction of a smooth three dimensional scene starting from the visible part of an apparent contour. u003cbr /u003eu003cbr /u003eThe authors focus their attention on the manipulation of apparent contours using a finite set of elementary moves, which correspond to diffeomorphic deformations of three dimensional scenes. u003cbr /u003eu003cbr /u003eA large part of the book is devoted to theu0026#xa0; algorithmic part, with implementations, experiments, and computed examples. The book is intended also as a user's guide to the software code appcontour, writtenu0026#xa0;for the manipulation of apparent contours and their invariants. This book is addressed to theoretical and applied scientists working in the field of mathematical models of image segmentation.
