The participation of scientists, engineers, and managers from 24 countries reflected the high interest in the use of small satellites for dedicated missions applied to Earth observation. u003cbr /u003eu003cbr /u003eAs in the previous symposia, the contributions showed that dedicated Earth observation missions cover a wide range of very different tasks. These missions provide increased opportunities for access to space and can be conducted relatively quickly and inexpensively. The spacecraft bus, the instruments, and the ground systems can be based either on optimized off-the-shelf systems with little or no requirements for new technology, or on new high-technology designs. u003cbr /u003eu003cbr /u003eAudience: u003cbr /u003eThis book will be of interest to practitioners and professionals in the remote sensing field.
